

**New irrigation facilities are permitted per the following guidelines:**

- Schedule 80 sleeving
- Marking tape
- Minimum 18 inch depth
- Mark/stamp on curb – IS (Irrigation System) and/or placard at back of curb
- Sleeves must be in a recorded easement (easement width is dependent on what is needed for installation and/or repairs). To the extent possible, the easements should be created at the time of development/platting
- Sleeve should extend beyond the right-of-way (into private property), unless otherwise approved by TDOT
- Minimize the number of easements/crossings of arterial and/or collector roadways
