

## ***WATER PLAN: 2000-2050***

### **ACKNOWLEDGEMENTS**

*Water Plan: 2000-2050* was prepared by staff in the City of Tucson Water Department's Planning and Engineering Division. Their dedication made this multi-year in-house effort possible. And it is only the beginning.

*Water Plan: 2000-2050* was developed in cooperation with members of the **City of Tucson Citizens' Water Advisory Committee (CWAC)** and its Planning and Policy Subcommittee. CWAC members graciously volunteer their time and energies to help make Tucson Water a better municipal Utility. Past and present Subcommittee members who worked most closely with Tucson Water's resource planners include **Francis Boyle, Sarah Evans, Keith Gentzler, Stephen Popelka, David Smutzer, David Turner, and Ron Wong.**

Tucson Water also thanks the following individuals and organizations for their time, knowledge, and assistance. **Andy Gunning, Charles Hodges, and Sandy White** (Pima Association of Governments) and **Susan Kanzler** (Arizona Department of Economic Security) provided information used to generate population projections within the Long-Range Planning Area and Tucson Water's projected service area.

**Laura Grignano, Diane Kusel, Jeff Tannler, and Virginia Welford** (Arizona Department of Water Resources) provided helpful assistance in updating historical water-user data within the current bounds of the Tucson Active Management Area. Thanks also go to **Thomas Carr** and **Don Gross** (Arizona Department of Water Resources) who conducted a modeling analysis of potential future shortages on the Colorado River and how they might impact the City of Tucson's annual Central Arizona Project allocation in the coming years.

**Holly Richter** (The Nature Conservancy) generously shared the latest information on the demand management programming for the Sierra Vista area. **Dr. Julio L. Betancourt** (United States Geological Survey) verified historical information on surface-water flow in the Santa Cruz River. And last but not least, **Joe Gelt** (University of Arizona, Water Resources Research Center) provided historical information that helped to tell Tucson's water-resource story.

There are many unnamed others who also contributed to this effort. Those who have had to grapple with the intricacies of water-resource planning can appreciate how much indebtedness is owed to so many. Thanks go to all of you...you know who you are.
